---

1. Use Runge-Kutta-4 method to solve and the following differential equation and compare with analytical form over the range $x \in [0, \pi/5]$. Use step sizes 0.1, 0.25, 0.45.

$$\frac{dy}{dx} = (x + y)^2 \quad \text{with } y(0) = 1 \qquad \tan \ (x + y) = x + \frac{\pi}{4}$$

2. Use RK4 to solve the damped simple harmonic oscillator using the following initial values and parameters over a time range $[0, 40]$. Plot variation of x, v and total energy E with time t.

$$\ddot{x} + \ \dot{x} + \omega^2 x = 0, \ \text{with} \ x(0) = 1.0, \ v(0) = 0.0 \ \text{and} \ k = 1.0, \ m = 1.0, \ = 0.15$$
